3 CLINICAL EPISODE CONSTRUCTION OVERVIEW

The following document describes the specifications used to construct Clinical Episodes for the Bundled Payments for Care Improvement Advanced (BPCI Advanced) model. Clinical Episodes are constructed using all inputs in Table 1. The main components of Clinical Episodes are Parts A and B claims from the Common Working File (CWF). Figure 1 below outlines the basic principles of a Clinical Episode.2

![Figure 1 – Clinical Episode Window and Services](image)

Notes: 1) Triangles above the Beneficiary’s Timeline of Healthcare Services represent services included in the Clinical Episode. 2) The Clinical Episode includes payments from up to one day prior to the Anchor Stay /Anchor Procedure to capture Emergency Department (ED) claims and Global Surgery Codes (GSC).

---

2 All terms used in Figure 1 are defined in Section 5.
The twenty-nine inpatient and three outpatient Clinical Episode categories are identified by the MS-DRGs of an inpatient admission or the HCPCS of a procedure performed in an outpatient setting. Clinical Episodes are constructed to include all services that overlap the Clinical Episode window, with some exceptions. Clinical Episode-level payments are created by summing official CMS standardized allowed amounts for all non-excluded services. These *standardized payments* reflect the cost of services after removing variation in spending arising from geographical adjustment of reimbursement in CMS payment systems (e.g. hospital wage index and geographic practice cost index (GPCI)) and from policy-driven adjustments (e.g. indirect medical education (IME) adjustments). This process produces spending for each Clinical Episode; henceforth, all references to spending are assumed to be in standardized allowed amounts.

After Clinical Episodes are constructed, standardized payments for each Clinical Episode in the baseline period are updated to Model Year dollars using MS-DRG-specific price update factors for initiating inpatient stays, HCPCS-specific price update factors for initiating outpatient procedures, and setting-specific price update factors for non-initiating claims. This allows the model to update the standardized allowed amount that providers would receive based on how inputs have changed in the various Medicare payment systems while holding constant the mix of services in the baseline period. This approach is referred to as index-price trending.

These index-price trended historical Clinical Episodes represent the basis for comparing Episode Initiator performance in subsequent periods. Other changes in Clinical Episode spending, due to efficiency gains, peer group trends, or changes in patient case-mix, are discussed in the Target Price specifications methodology document.

The specifications are divided into the 6 sections that correspond to detailed descriptions of the sequential stages of the Clinical Episode construction process. This document contains specifications for constructing Clinical Episodes in both the baseline period and Performance Periods of a Model Year. The steps in Section 5, and Section 6 discuss general specifications used in the construction of baseline period and Performance Period Clinical Episodes. The steps

---

3 A complete list of the MS-DRGs and HCPCS that initiate a BPCI Advanced Clinical Episode can be found in the “Episode Definitions – Model Year 1” xls file at the BPCI Advanced Participant Resources Page.
4 A list of Clinical Episode exclusions can be found in Step 14 and in the “Exclusions from Clinical Episodes (DRGs & HCPCSs codes) Model Years 1 & 2” xls file at the BPCI Advanced Participant Resources Page.
6 The price update factors will be updated to reflect the changes in Medicare payment systems as more recent fee schedules become available during the Model Year.
7 Target Price Specifications for Model Years 1 and 2 can be found in the “BPCI Advanced Target Price Specifications - Model Years 1-2” PDF file at the BPCI Advanced Participant Resources Page.
in Section 4, Section 7 and Section 8 are applied to construct baseline period Clinical Episodes, which are the inputs used to construct preliminary Target Prices. The steps in Section 9 are applied to construct Performance Period Clinical Episodes, which are inputs used to construct final Target Prices and Performance Period Clinical Episode spending.

- **Section 4** describes the mapping of MS-DRG and APC changes over time
- **Section 5** describes defining Clinical Episode shells
- **Section 6** describes assigning payments and services to Clinical Episodes
- **Section 7** describes updating historical payments from the baseline period to the Model Year
- **Section 8** describes finalizing baseline period Clinical Episodes
- **Section 9** describes finalizing Performance Period Clinical Episodes

Table 3 below contains the baseline period and the Performance Periods for Model Years 1 and 2 (10/1/2018-12/31/2019). This document will be updated for Model Year 3.
## Table 2 – Model Years 1 and 2 Clinical Episode Period Date Ranges

<table>
<thead>
<tr>
<th>Clinical Episode Period</th>
<th>Date Range</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Baseline Period</strong></td>
<td>Clinical Episodes that have Anchor Stays with a discharge date or Anchor Procedures with a procedure completion date between 1/1/2013 and 12/31/2016.(^8)</td>
</tr>
<tr>
<td><strong>Performance Period 1 (Model Years 1 and 2)</strong></td>
<td>Clinical Episodes with a Clinical Episode end date between 10/1/18 and 6/30/19(^9),(^10), and start dates on or after 10/1/18(^11).</td>
</tr>
<tr>
<td><strong>Performance Period 2 (Model Year 2)</strong></td>
<td>Clinical Episodes with a Clinical Episode end date between 7/1/19 and 12/31/19.(^12)</td>
</tr>
<tr>
<td><strong>Performance Period 3 (Model Year 3)</strong></td>
<td>Clinical Episodes with a Clinical Episode end date on or after 1/1/20, but an Anchor end date on or before 12/31/19.</td>
</tr>
</tbody>
</table>

---

8 Procedure completion date for Anchor Procedures is indicated by the revenue center date.

9 When a Participant terminates participation in the Model, the Participant will be accountable for Clinical Episodes if the Anchor Stay/Anchor Procedure discharge/completion date is prior to the effective date of the termination. Performance Period attribution will be based on Clinical Episode end date.

10 Participants will not be assigned Clinical Episodes that begin before the model goes live on 10/1/18.

11 Assignment to a Model Year is typically based on Anchor end date. However, in Model Year 1 and 2, there is an additional restriction that the Clinical Episode must start on or after the start of Model Year 1.

12 See Footnote 9.
4 MAP MS-DRG AND APC CHANGES OVER TIME

When an MS-DRG or APC\(^{13}\) changes in an annual update, comparing Clinical Episode spending between different time periods requires mapping between existing codes to new codes. Such a mapping ensures that comparisons of Clinical Episode spending across different time periods represent the same clinical content. This mapping aids in the consistent construction of Clinical Episodes between historical baseline periods and subsequent Performance Periods.

As the model progresses, mappings for MS-DRG and APC will be incorporated in accordance with the most recent IPPS/OPPS Final Rules. These steps are applicable to baseline period Clinical Episodes to ensure consistency with the Performance Period Clinical Episodes. Specifically, for Model Years 1 and 2, the Clinical Episodes in the baseline period will be mapped up to three times (FY2019, CY2019, and FY2020) to align with updates to CMS fee-for-services payment rates.

### Table 3 – Section 4 Inputs and Outputs

<table>
<thead>
<tr>
<th>Inputs</th>
<th>Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>• IPPS Final Rules (Fiscal Year 2013 – Fiscal Year 2020)</td>
<td>• Inpatient and Outpatient CWF claims with applicable mapped MS-DRGs and APCs</td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>• Inpatient and Outpatient CWF claims</td>
<td></td>
</tr>
</tbody>
</table>

**Step 1. Map MS-DRG and APC changes over time:**

- **Step 1a.** For all MS-DRGs in the baseline period, map the changes in MS-DRG between the baseline year and the appropriate Fiscal Year (in the Model Year) using IPPS annual addendums to Final Rules.\(^{14}\) Specifically, update the mapping using FY2019 and FY2020 final rules, for 2018Q4-2019Q3 and 2019Q4 respectively.

---

\(^{13}\) Effective January 1, 2015, CMS established Comprehensive-APC (C-APCs) to provide all-inclusive payments for certain procedures. All sections of this document use APCs to refer to both APCs and C-APCs.

\(^{14}\) For a complete description of MS-DRG mapping specifications, see “Appendix_A_BPCI_Advanced_MS_DRG_Mapping_Model_Years_1_2.docx.”
Assign each inpatient stay the mapped MS-DRGs\textsuperscript{15} for Model Year.

- Step 1b. For all HCPCS, map all APC changes using the OPPS Final Rules.\textsuperscript{16}
  - Assigns each outpatient claim the mapped APC, if any, for the Model Year.

\textsuperscript{15} If there are no changes in the MS-DRG between the years, assign the original MS-DRG as the mapped MS-DRG for the other year.

\textsuperscript{16} The HCPCS-APC mapping also takes into account APCs that undergo complexity adjustments, if any.
5 DEFINE CLINICAL EPISODE SHELLS

This section describes the specifications to define National inpatient and outpatient Clinical Episodes shells. Section 5 and Section 6 use the following key terms:

- **Anchor Stay**: an inpatient stay at an Acute Care Hospital (ACH) with a qualifying MS-DRG, which in turn initiates a Clinical Episode. Anchor Stays start on admission to the ACH and end upon discharge, inclusively.

- **Anchor Procedure**: an outpatient procedure performed at an ACH with a qualifying HCPCS, which in turn initiates a Clinical Episode. Anchor Procedures start and end on the revenue center date of the qualifying procedure.

- **Post-Anchor period**: starts on the day the Anchor Stay/Anchor Procedure ends and is 90 days long. It encompasses all the relevant spending incurred for that beneficiary during that period.

Clinical Episode shells start with the admission to an inpatient Anchor Stay or the revenue center date of an outpatient Anchor Procedure and end 90 days after the end of the Anchor Stay/Anchor Procedure, including the day on which Anchor Stay/Anchor Procedure ends. The Clinical Episode shells define the period for which services can be included in the Clinical Episode spending and are comprised of Anchor Stay/Anchor Procedure and Post-Anchor Period. There is a 90-day lookback period before the start of the Clinical Episode shell. This period will include risk adjustors defined by beneficiary clinical history as observed in claims in the 90-day period prior to the start of the Clinical Episode shell, and will be used solely for risk adjusting Target Prices.

- **Section 5.1** explains the methodology to identify potential National Anchor Stays for inpatient Clinical Episodes.

- **Section 5.2** describes the methodology to identify potential National Anchor Procedures for outpatient Clinical Episodes.

- **Section 5.3** describes the process of creating the Post-Anchor period.

- **Section 5.4** describes the Clinical Episode-level exclusions.

These steps of constructing Clinical Episodes shells are identical for the baseline period and all Performance Periods for Model Years 1 and 2. For the Model Years 1 and 2, the baseline period includes all Anchor Stays/Anchor Procedures ending between January 1, 2013, and December 31, 2016. Model Years 1 and 2 contain two Performance Periods, as defined in Table 3. Performance Period 1 will span Clinical Episodes that start and end between 10/1/18 and 6/30/19.\(^{17,18}\) Performance Period 2 will span Clinical Episodes that end between 7/1/19 and

\(^{17}\) Participants will not be assigned Clinical Episodes that begin before the model goes live on 10/1/18.

\(^{18}\) See Footnote 9
12/31/19. Performance Period 3 is contained in Model Year 3 and will include Clinical Episodes where the anchor end date is on or before 12/31/19, but the Clinical Episode end date is between 1/1/20 and 6/30/20.

</tr>
<tr>
<td>Outputs</td>
</tr>
<tr>
<td>• Clinical Episode shells</td>
</tr>
</tbody>
</table>

5.1 Identify Potential National Anchor Stays for Inpatient Clinical Episodes

The following steps are used to identify potential National Anchor Stays from the universe of CWF inpatient claims. Anchor Stays initiate inpatient Clinical Episodes.

- **Step 2. Limit to inpatient stays with positive standardized allowed amounts.**
- **Step 3. Apply transfer logic:** Define an acute-to-acute transfer as consecutive inpatient stays for a beneficiary where the admission date of the latter stay is the same as the discharge date of the previous stay for different short-term hospitals. Acute-to-acute transfers are treated as one continuous hospitalization and are assigned the admission date and provider from the first leg of the transfer and the MS-DRG and discharge date from the last leg.\(^{20,21}\)

---

\(^{19}\) Ibid.

\(^{20}\) If any of the legs in a chain of inpatient transfers occur at a Cancer Hospital or Critical Access Hospital, exclude the Clinical Episode.

\(^{21}\) Payments from both inpatient stays will be considered when services and associated payments are assigned in Section 6.
• **Step 4. Construct Anchor Stays:** Restrict to inpatient stays at an ACH\(^2\) that are initiated by a qualifying MS-DRG\(^3\) for Clinical Episode categories. The start and end dates of the Anchor Stay are the admission date and discharge date respectively.

### 5.2 Identify Potential National Anchor Procedures for Outpatient Clinical Episodes

The following steps are used to identify potential National Anchor Procedures from the universe of CWF outpatient claims. Anchor Procedures initiate outpatient Clinical Episodes.

• **Step 5. Limit to outpatient lines with positive standardized allowed amounts.**

• **Step 6. Apply same day, tie-breaking precedence rules:** For cases where multiple potential Anchor Procedures are possible on the same day for the same beneficiary, apply the following steps in the order listed until the ties are broken.
  - **Step 6a.** Select the outpatient line with the higher standardized line allowed amount.
  - **Step 6b.** Select the outpatient line with the later processing date.
  - **Step 6c.** Select the outpatient line with the higher charge amount.
  - **Step 6d.** Select the outpatient line with the smaller claim identifier number.
  - **Step 6e.** Select the outpatient line with the smaller line item number.

• **Step 7. Construct Anchor Procedures:** Take all outpatient lines at an ACH that are initiated by HCPCS for the three outpatient Clinical Episode categories. Set the start and end of the Anchor Procedure equal to the revenue center date.

### 5.3 Construct Post-Anchor Period

The following steps are used to define the second component of the Clinical Episode shell, the Post-Anchor period.

• **Step 8. Define Post-Anchor period:** Inpatient and outpatient Clinical Episodes’ Post-Anchor periods respectively begin on the day Anchor Stays (Step 4) and Anchor Procedures (Step 7) end and extend for 90 days.\(^4\)

---

\(^2\) ACH provider numbers include those with the last four digits of the CCN in 0001-0879, or the whole provider number between 450880 and 450894, excluding PPS-Exempt Cancer Hospitals (05-0146, 05-0660, 10-0079, 10-0271, 22-016, 33-0154, 33-0354, 36-0242, 39-0196, 45-0076, and 50-0138), Critical Access Hospitals (the last four digits of the CCN in 1300-1399) and hospitals in Maryland (CCN begins with “21” or “80”). Additionally for the Performance Period, exclude hospitals participating in the Rural Community Hospital (RCH) demonstration and all Participant Rural Hospitals in the Pennsylvania Rural Health Model. These RCH and PA Rural hospitals are identified by CMS Participation list.

\(^3\) Uses MS-DRGs mapped to applicable fiscal year in the Performance Period as described in Section 4.

\(^4\) The discharge date and the procedure completion date are both day one of the Post-Anchor period.
• **Step 9. Truncate Clinical Episode shells where a beneficiary dies during the Post-Anchor period:** For Clinical Episode shells where a beneficiary dies during the Post-Anchor period, truncate the end date of the Post-Anchor period to match the beneficiary death date.25

### 5.4 Exclude Clinical Episode Shells

Implement the following exclusions for Clinical Episode shells.

• **Step 10. Enact Clinical Episode-level exclusions:** Exclude Clinical Episode shells where:
  
  o The Clinical Episode shell is not in the relevant study period.
    
    ▪ For the baseline period, exclude Clinical Episodes with an Anchor Stay/Anchor Procedure that ends outside of the relevant study period. For example, if constructing Clinical Episodes for the baseline period, limit to inpatient Clinical Episodes with a discharge date and outpatient Clinical Episodes with a procedure completion date between 1/1/2013 and 12/31/2016.
    
    ▪ For the Performance Period, exclude Clinical Episodes that end outside of the relevant study period.26,27

  o The beneficiary is not continuously enrolled in Medicare Part A and Part B during the Clinical Episode period or the 90-day lookback period. The beneficiary is covered through managed care plans (such as Medicare Advantage) during the Clinical Episode period or the 90-day lookback period.

  o The beneficiary is receiving services for End-Stage Renal Disease (ESRD) during the Clinical Episode period or the 90-day lookback period. Specifically, a beneficiary is considered to be receiving ESRD services for any of the following conditions:
    
    ▪ The start date and end date of Medicare ESRD coverage or dialysis in the EDB overlap any time with the Clinical Episode period or the 90-day lookback period or;
    
    ▪ Any portion of the Clinical Episode period or the 90-day lookback period overlaps the period defined by the 36 months following the transplant start date in the EDB.

  o The beneficiary has a primary payer other than Medicare during the Clinical Episode period or the 90-day lookback period.28

---

25 Beneficiary death date is taken from the EDB.
26 Clinical Episodes that start before the model goes live in 10/1/2018 are not considered.
27 See Footnote 9
28 This restriction satisfies excluding Clinical Episodes where beneficiary is covered through United Mine Workers of America Health and Retirement Funds.
o The beneficiary dies during the Anchor Stay or Anchor Procedure.

o The Anchor Stay lasts 60 days or more (the Clinical Episode shell lasts 150 days or more).

o The Anchor Procedures initiated by outpatient lines do not have the highest ranking J1\(^{29}\) status indicator on the claim.

o Beneficiaries are prospectively aligned to Accountable Care Organizations (ACOs) that have sufficient two-sided risk: (1) a Next Generation ACO; (2) a Vermont All-payer ACO, which follows the Next Generation ACO Model design; (3) an ESRD Seamless Care Organization; or (4) a Track 3 or ENHANCED track Shared Savings Program ACO from initiating a BPCI Advanced Clinical Episode. This exclusion is only applicable to Clinical Episodes in the Performance Period.

\(^{29}\) J1 indicates Hospital Part B services paid through C-APC.
This section describes the process of determining which items and services are included in Clinical Episodes. It is intended to provide a general understanding of the payment aggregation methodology for BPCI Advanced.

- **Section 6.1** describes the general rules for payment aggregation.
- **Section 6.2** discusses payments that are excluded from Clinical Episodes.
- **Section 6.3** describes the process for prorating payments from claims.
- **Section 6.4** discusses calculating the total Clinical Episode spending.

All steps in this Section are the same for construction of both baseline period and Performance Period Clinical Episodes.

### 6.1 General Rules for Payment Aggregation

This section describes the methodology to determine which items and services are included in the Clinical Episode and how payments from those services are allocated to the Clinical Episode. The methodology identifies all qualifying items and services occurring concurrent to at least one day of a Clinical Episode to determine if all payments, or a subset of
payments, are grouped to the Clinical Episode. Regardless of setting, all non-excluded payments are assigned if they occur during the Clinical Episode.

- **Step 11. Consider Parts A and B claims for payment aggregation:** Consider payments from claims from all Medicare Part A and B care settings, including inpatient, Carrier, outpatient, Home Health Agency Services, Skilled Nursing Facility, Durable Medical Equipment, and Hospice.

- **Step 12. Limit to eligible claims:** Restrict to claims that satisfy the following criteria:
  - Have a standardized payment amount greater than zero, and
  - The claim’s service start dates overlap at least one day of the Clinical Episode or one day prior to the Clinical Episode.

- **Step 13. Assign claims as occurring during the Clinical Episode:** Assign all claims that have service dates during the Clinical Episode and all payments from the initiating Anchor Stay or Anchor Procedure. Additionally, include claims with Global Surgery Code (GSC) line items or involving an Emergency Department (ED) in the one day prior to the Anchor Stay/Anchor Procedure to capture all associated payments.30
  - **Step 13a.** Identify Carrier claims related to a qualifying GSC as all Carrier claims with global surgery indicators of 000, 010, 090 and YYY.31 Assign all Carrier claims related to a qualifying GSC on the start date or one day prior to the Clinical Episode.
  - **Step 13b.** Identify ED claims as outpatient claims with revenue center codes starting with 0450, 0451, 0452, 0456, 0459, 0981 or Carrier claims with a place of service (POS) equal to 23 (Emergency Department) occurring on the same day as an ED outpatient claim. Assign all these ED claims that occur on the start date or one day prior to the Clinical Episode.

### 6.2 Excluded Payments

Although the BPCI Advanced model operates under a total-cost-of-care concept, in which all Medicare Fee-For-Service (FFS) payments for services furnished during the Clinical Episode are generally included, payments from the following claims are removed from Clinical Episodes.

- **Step 14. Apply BPCI Advanced exclusions logic:** Remove payments for the following BPCI Advanced specific exclusions:

---

30Participants will be responsible for all Clinical Episode costs, including costs from the one-day prior.
31Global surgery indicators are modifiers on procedure codes that indicate the presence of surgical procedures and the length of the post-operative period.
Part B payments for drugs on the average sales price (ASP) list found on the outpatient, Carrier, and Durable Medical Equipment claims.

Blood clotting factor, identified by HCPCS J7199, on the outpatient, Carrier and Durable Medical Equipment claims.

New technology add-ons, identified through value code 77 on IPPS hospital claims.

All Part A and B payments that occur during an inpatient readmission based on the excluded readmission MS-DRGs list.

Pass-through payments for medical devices on OPPS hospital outpatient claims, identified through OPPS status indicator H.

Claims that represent per-beneficiary-per-month (PBPM) payments from Carrier and Hospice claims. Specifically,

- Remove Carrier claims for an Oncology Care Model PBPM payment as defined by HCPCS code G9678.
- Remove Hospice claims for a Medicare Care Choices Model PBPM payment as defined by Demo Code = 73 and Type of Bill = 81x or 82x.

### 6.3 Prorate Claims

This section describes the methodology used to prorate claims and payments that span beyond the Clinical Episode so as to appropriately allocate the payments to the Clinical Episode. Table 7 lists all claim and payment types and their respective proration methodologies. For a full description of the various proration methodologies, see [Steps 15 – 17](#).

#### Table 6 – Proration Methodology by Claim and Payment Type

<table>
<thead>
<tr>
<th>Claim Type</th>
<th>Proration Methodology</th>
</tr>
</thead>
<tbody>
<tr>

<td>Never Prorate</td>
</tr>
<tr>
<td>Skilled Nursing Facility</td>
<td>Per Diem</td>
</tr>
</tbody>
</table>

- **Step 15. Identify claims to prorate:** Identify all claims that overlap with the Clinical Episode but end after the Clinical Episode to determine if all or a subset of payments are assignable to the Clinical Episode.
  - Never prorate outpatient, Carrier and Durable Medical Equipment claims. Assign them to the Clinical Episode.

- **Step 16. Identify and prorate applicable claims based upon a per-diem rate:** To prorate on a per diem basis, assign payments to the Clinical Episodes based on the number of days in the claim that occur during the Clinical Episode. Prorate the following types of claims on a per diem basis.
  - Critical Access Hospitals
  - Home Health Agency<sup>35</sup>
  - Hospice
  - Inpatient Psychiatric Facilities
  - Skilled Nursing Facility

<sup>34</sup> Step 17b explains the GMLOS methodology.
<sup>35</sup> For Low Utilization Payment Adjustment (LUPA) Home Health Agency claims, only consider the visits that occur within the Clinical Episode window since these claims are paid on a per visit basis.
• **Step 17. Identify and prorate remaining claims:** For the remaining claim types, Inpatient Rehabilitation Facility, Long-Term Care Hospital, and IPPS prorate outlier and non-outlier payment amount separately.
  
  o **Step 17a.** Prorate outlier payments. Prorate outlier payments on a per-diem basis using the methodology described in **Step 16**.
  
  o **Step 17b.** Prorate non-outlier payments. For non-outlier payments, compare the number of days of the inpatient stay (that needs to be prorated) overlapping the Post-Anchor period with the GMLOS by MS-DRG and the fiscal year of the discharge date.
    
    ▪ If the number of days overlapping the Post-Anchor period is greater than the GMLOS, assign the full non-outlier payment amount to the Post-Anchor period.
    
    ▪ Otherwise, prorate on a per diem basis, giving double weight to the first day of the overlap.

6.4 **Calculate Total Clinical Episode Spending**

After assigning payment amounts to Clinical Episodes for all claim payments across all settings, sum payment amounts at the Clinical Episode level.

• **Step 18. Calculate the overall Clinical Episode spending:** Sum all payments assigned to the Clinical Episode to calculate total Clinical Episode spending.

  For the baseline period, the Clinical Episode dataset created at the end of **Step 18** is inflated to Model Year dollars as described in **Section 7** and then used as an input in **Section 8** to create the final set of baseline period Clinical Episodes. For the Performance Period, the Clinical Episodes from **Step 18** are used as an input in **Section 9** to create a final National and Participant set of Clinical Episodes.
7 UPDATE PRICES FROM BASELINE TO MODEL YEAR DOLLARS

This section describes the process of updating historical prices from the baseline period to the Model Year. Prior to estimating the model of Clinical Episode spending on data from the baseline period, the standardized payments of each Clinical Episode are inflated to Model Year dollars using MS-DRG-specific price update factors for initiating inpatient stays, HCPCS-specific price update factors for initiating outpatient procedures, and setting-specific price update factors for non-initiating items. These price update factors ensure that Clinical Episodes in the baseline period are comparable to Performance Period Clinical Episodes, by accounting for changes to payment rates.

Use the most recently available inputs during preliminary Target Price construction to calculate price update factors. Since preliminary Target Prices are provided in advance of the Model Year, the inputs to calculate update factors for the Model Year may not be available at the time of calculation. In such cases, incorporate newly published payment rates into the price update methodology while the model is active to ensure that all prices in the baseline period reflect the most updated set of official rates for all settings.

Table 7 – Section 7 Inputs and Outputs

<table>
<thead>
<tr>
<th>Inputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>• National set of Clinical Episodes</td>
</tr>
<tr>
<td>• Setting-Specific Price Update Datasets (See Table 1)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>• National set of Clinical Episodes with updated prices</td>
</tr>
</tbody>
</table>

• **Step 19. Update payments from the initiating inpatient stay during the Anchor Stay:**
For payments from the inpatient claim that initiates the Anchor Stay, the update factor is calculated as a ratio of MS-DRG rates, calculated as the product of the IPPS base rate and MS-DRG weight in the Performance Period to the baseline period.\(^{36}\)

  o The following example adjusts forward an Anchor Stay with MS-DRG 483 from Fiscal Year 2015 in the baseline period. To update the payments from this stay to Fiscal Year 2018, use the following equation:

\(^{36}\) MS-DRGs in the baseline period are mapped forward to the Model Year using the methodology described in Section 4.
• (2018 IPPS Base Rate * 2018 MS-DRG Weight 483)/(2015 IPPS Base Rate * 2015 MS-DRG Weight 483)
  o Multiply payments from the initiating institutional claim for the Anchor Stay by the MS-DRG update factor.

• **Step 20. Update payments from the initiating outpatient claim during the Anchor Procedure:** For payments from the initiating outpatient claim during the Anchor Procedure, use a separate approach depending on whether the C-APCs had been adopted or not in the baseline year.
  o **Step 20a.** Update HCPCS payments for the Anchor Procedure in the baseline year after adoption of C-APCs. For Anchor Procedure HCPCS that are paid after the adoption of C-APCs in both periods:
    ▪ Calculate the numerator of the update factor as the payment rate of the APC that the Anchor Procedure’s HCPCS maps to in the Performance Period.\(^{37,38}\)
    ▪ Calculate the denominator as the payment rate of the APC the Anchor Procedure HCPCS maps to in the baseline year.
    ▪ Once the update factor is calculated, multiply the Anchor Procedure outpatient line amount by the update factor.
  o **Step 20b.** Update HCPCS payments for the Anchor Procedure in the baseline year before adoption of C-APCs. For these Anchor Procedure HCPCS where the baseline year was before the adoption of C-APC and the Performance Period was after the adoption of C-APC:
    ▪ Calculate the numerator of the update factor as the payment rate of the APC the Anchor Procedure’s HCPCS maps to in the Performance Period.
    ▪ Calculate the denominator as the average of line payments of the Anchor Procedure’s HCPCS and other eligible services on the same claim across all the Clinical Episodes in that Clinical Episode category in that baseline year using the following steps:
      • Calculate outpatient Anchor Procedure payments as the sum of line payments from the Anchor Procedure’s HCPCS and line payments for the following services on the same claim to mimic the OPPS modeling of C-APC payments:
        o Packaged or conditionally packaged procedure codes, indicated by claim-reported status indicators N, Q1, or Q2;

---

\(^{37}\) APCs in the baseline period are mapped forward to the Model Year using the methodology described in [Section 4](#).

\(^{38}\) The APC payment rates can be found from [OPPS Final Rule Addendums B and J](#).
o Major separately paid OPPS procedure codes, indicated by claim-reported status indicators P, S, T, or V;
o Major separately paid OPPS procedure codes that may qualify for composite, indicated by claim-reported status indicator Q3;
o Non-pass-through drugs and biologicals, indicated by claim-reported status indicator K;
o Blood products, indicated by claim-reported status indicator R.
o *Exceptions:* Do not include payments for services that are explicitly excluded from comprehensive packaging:
  ▪ ambulance services (status indicator A);
  ▪ mammography services (status indicator A);
  ▪ pass-through drugs and devices (status indicators G and H);
  ▪ brachytherapy services (status indicator U);
  ▪ preventive services; corneal tissue, CRNA services, hepatitis B vaccine (status indicator F); and
  ▪ influenza and pneumococcal pneumonia vaccines (status indicator L).
  Additionally, exclude outpatient lines related to costs for Part B drugs on ASP file and blood clotting factors to control bleeding for hemophilia patients as mentioned in Step 14.

• Calculate the average of outpatient Anchor Payments from all the Clinical Episodes in the baseline year for that Anchor Procedure HCPCS and mapped APC. The mapped APC will have already taken into account the presence of complexity adjustment (if any) on the claim.
  ▪ After calculating the factors for each HCPCS (taking into account complexity adjustment if any) for each year of the baseline period, multiply the relevant outpatient Anchor Payments by the relevant update factor.

**Table 8 – Price Update Schedule for Standardized Clinical Episode Spending**

</tbody>
</table>
Step 21. Update payment for non-initiating items during the Anchor Stay/Anchor Procedure and Post-Anchor period: For non-initiating items during the Anchor Stay/Anchor Procedure and Post-Anchor period, split items into six settings: IPPS (non-initiating), PFS, IRF, SNF, HHA, and Other. Non-initiating OPPS will be included in Other. Each setting-specific update factor captures the change in the price level for that setting between a particular baseline year and a particular sub-period of the Model Year (CY2018Q4, which has CY2018 and FY2019 payment rules; CY2019Q1-3, which has CY2019 and FY2019 payment rules; and CY2019Q4, which has CY2019 and FY2020 payment rules).

- Calculate the update factors for non-initiating IPPS, SNF, and HHA settings. For these settings, the setting-specific update factors are based on taking baseline year claims that belong to the respective setting and are grouped to Clinical Episodes, pricing those claims under both Model Year sub-period rates and baseline year rates, and then taking the ratio of per unit spending under the Model Year sub-period rates to per unit spending under the baseline year rates.

- Calculate the PFS update factor. It is the weighted average of anesthesia and physician update factors, where the weights are the payment for anesthesia and physician carrier claims respectively in the baseline year and are grouped to the Clinical Episodes. The PFS is also specific to the ACH at which the Clinical Episodes were initiated.

- Calculate the IRF update factor. It is the ratio the Model Year sub-period conversion factor to the baseline year conversion factor.

- Calculate the Other update factor as the chained Medicare Economic Index (MEI) between the baseline and performance period.

---

39 Also includes non-eligible payments from the initiating institutional outpatient claim for the Anchor Procedure.
40 High level descriptions of the update factors are provided here. The SNF update factor will be discussed in more detail in an appendix.
41 Setting-specific update factors for non-initiating IPPS, SNF, and HHA are specific to the ACH at which the Clinical Episodes were initiated.
42 Since IRF is updated on a fiscal year basis, the conversion rate used for the baseline year is a weighted average of the conversion rates from the two fiscal years overlapping the baseline year.
43 Let BY denote the baseline year, and MYS denote the Model Year sub-period.

\[
UF_{Other} = \prod_{[BY \text{- years} \leq MYS]} (1 + MEI_{year})
\]
Calculate the overall update factor using the following equation. Specifically, calculate the payment ratio as the ratio of the ACH’s non-initiating Clinical Episode spending for each setting and baseline year to its total non-initiating Clinical Episode spending for the same year. The sum of these payment ratios for each ACH and baseline year across the six settings is 1. Then, take the summation of the Update factor for each category weighted by the specific payment ratio.

$$\text{Overall UF} = \sum_{s \in \{IPPS,PFS,IRF,SNF,HH A,\text{Other}\}} UF_s \times \text{Payment Ratio}_s$$

- Where $UF_s$ is the setting-specific update factor and $\text{Payment Ratio}_s$ is the ratio of total service payments in that category to total non-initiating Clinical Episode spending, such that:

$$\sum_{s \in \{IPPS,PFS,IRF,SNF,HH A,\text{Other}\}} \text{Payment Ratio}_s = 1$$

- For each ACH and baseline year, multiply the non-initiating payment by the overall update factor calculated above.

At the end of Step 21, the Clinical Episode dataset in the baseline period will have payments inflated to the Model Year sub-period using the most recently available fee schedules. This dataset will be used as an input to Section 8 to finalize baseline period Clinical Episodes.
8 FINALIZE BASELINE PERIOD CLINICAL EPISODES

This section describes the methodology to create a final set of inpatient and outpatient Clinical Episodes for National and Participant populations in the baseline period. The first steps are to winsorize Clinical Episode spending on the upper and lower bounds and to assign Clinical Episodes to Participant(s). This final set of Clinical Episodes are the inputs to the risk adjustment model used to construct the preliminary Target Prices.

Table 9 – Section 8 Inputs and Outputs

<table>
<thead>
<tr>
<th>Inputs</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Final National set of Clinical Episodes with winsorized prices, indicating whether it was assigned to any Participant</td>
</tr>
</tbody>
</table>

- **Step 22. Winsorize Clinical Episode spending**: To limit extreme values, winsorize Clinical Episode spending at the 1st and 99th percentile within each MS-DRG or APC pooled for each baseline year.
  - Set all values below the 1st percentile to the 1st percentile.
  - Set all values above the 99th percentile to the 99th percentile.

- **Step 23. Identify Clinical Episodes eligible for attribution to a PGP**: To be eligible for attribution to a PGP, consider Clinical Episodes with at least one concurrent Carrier claim that has positive standardized payment and is billed by a participating PGP during the Anchor Stay/Anchor Procedure. A Carrier claim is concurrent with an Anchor Stay or Anchor Procedure if: (1) it is for the same beneficiary and (2) the expense date on the Carrier claims falls within the Anchor Stay/Anchor Procedure of the Clinical Episode, including the one day prior.
  - **Step 23a.** For each Clinical Episode, identify all the concurrent Carrier claims.
  - **Step 23b.** Limit to Clinical Episodes that have at least one concurrent Carrier claim billed by a participating PGP (Step 23a). Only these Clinical Episodes are eligible for attribution to a PGP.

- **Step 24. Create a list of PGP-NPI combinations**: For Clinical Episodes identified in Step 23, create a list of PGP-NPI combinations using the participating PGPs on the
concurrent Carrier claims first with an attending NPI (on the Anchor Stay/Anchor Procedure) and then with an operating NPI \(^{44}\) (on the Anchor Stay/Anchor Procedure). For example, if a Clinical Episode has two participating PGPs that bill concurrent Carrier claims and the attending and operating NPIs on the Anchor Stay are different, then the PGP-NPI list will include four pairs. Each participating PGP in this example will be paired first with the attending NPI and then with the operating NPI.

- **Step 25. Attribute Clinical Episodes to participating PGPs:** For Clinical Episodes identified in **Step 23**, apply the following steps to identify all PGP-NPI combinations (**Step 24**) that can be assigned the Clinical Episode: \(^{45}\)
  
  o **Step 25a.** Pull all the Carrier claims \(^{46}\) occurring during the Anchor Stay/Anchor Procedure, including the one day prior, for any beneficiary.

  o **Step 25b.** For each Clinical Episode, check whether the performing NPI and TIN on the Carrier claims (**Step 25a**) match any of the PGP-NPI combinations (**Step 24**). attribute the Clinical Episode to all the participating PGPs that are matched.

- **Step 26. Assign Clinical Episodes to participating ACHs:** If the Clinical Episode is initiated by a participating ACH, assign it to that ACH.

---

\(^{44}\) Assumes that the attending NPI and operating NPI are different.  
\(^{45}\) Including the one day prior to the Anchor Stay/Anchor Procedure.  
\(^{46}\) Only consider Carrier claims with positive standardized allowed amount.
9 FINALIZE PERFORMANCE PERIOD CLINICAL EPISODES

This section describes the methodology to create the final set of inpatient and outpatient Clinical Episodes both for the National and Participant populations in each Performance Period during the Model Year. First, Clinical Episode spending are winsorized on the upper and lower bounds. Next, Clinical Episodes are linked to Participants. Then, only one Clinical Episode for an individual beneficiary is allowed to occur at a given time. That is, if a beneficiary has multiple Clinical Episodes with overlapping dates, only one of these Clinical Episodes is retained. Finally, Clinical Episodes are subset to only those that can be assigned to Participants.

Table 10 – Section 9 Inputs and Outputs

<table>
<thead>
<tr>
<th>Inputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>• National set of Clinical Episodes</td>
</tr>
<tr>

</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Final National set of Clinical Episodes with winsorized prices</td>
</tr>
<tr>
<td>• Participants Clinical Episodes</td>
</tr>
</tbody>
</table>

- **Step 27. Winsorize Clinical Episode spending**: To limit extreme values, winsorize Clinical Episode spending at the 1st and 99th percentile within each MS-DRG (for IP Clinical Episode categories) or APC (for OP Clinical Episode categories) for each Performance Period.
  - Set all values below the 1st percentile to the 1st percentile.
  - Set all values above the 99th percentile to the 99th percentile.

- **Step 28. Identify Clinical Episodes eligible for PGP attribution**: A Clinical Episode is said to be eligible for PGP attribution if the attending NPI or operating NPI had a billing relationship with a participating PGP during the Anchor Stay/Anchor Procedure. Apply the following steps to identify Clinical Episodes that may be eligible for PGP attribution:
  - **Step 28a.** For each Clinical Episode, consider all the concurrent Carrier claims with a positive standardized allowed amount (i.e. Carrier claims for that beneficiary occurring during the Anchor Stay/Anchor Procedure, including the one day prior.)

---

47 Includes one day prior.
- **Step 28b.** Limit to Clinical Episodes with at least one concurrent Carrier claim billed by a participating PGP. These are the Clinical Episodes that are eligible for attribution to a participating PGP.

- **Step 29. Create PGP-NPI lists:** For the Clinical Episodes that are eligible for attribution to a participating PGP, create a list of PGP-attending NPI combinations, where participating PGPs are the TINs on the concurrent Carrier claims and attending NPIs are those on the Anchor Stay/Anchor Procedure. Create another list of PGP-operating NPI combinations using the operating NPI on the Anchor Stay/Anchor Procedure.

- **Step 30. Attribute Clinical Episodes to participating PGPs:** For Clinical Episodes that are eligible for attribution to a participating PGP as identified in **Step 28**, apply the following steps:
  - **Step 30a.** Pull all the Carrier claims occurring during the Anchor Stay/Anchor Procedure, including the one day prior, for any beneficiary.
  - **Step 30b.** For each Clinical Episode, check whether the performing NPI and TIN on the Carrier claims (**Step 30a**) match any of the PGP-attending NPI combinations (**Step 29**).
    - If there is exactly one PGP-attending NPI combination that is a match, attribute the Clinical Episode to that participating PGP.
    - If the TIN and performing NPI on Carrier claims during the Anchor Stay/Anchor Procedure match multiple PGP-attending NPI combinations, use the following hierarchy to attribute the Clinical Episode:
      - Check whether the TIN and performing NPI on Carrier claims during the Anchor Stay/Anchor Procedure are for the same beneficiary as the Clinical Episode. If so attribute the Clinical Episode to that PGP.
      - If the application of the hierarchy still results in more than one PGP-NPI combination, do not attribute that Clinical Episode to a PGP.
  - For the remaining Clinical Episodes not attributed to a participating PGP through a billing relationship with the attending NPI, repeat the above steps to determine whether there are Carrier Claims during the Anchor Stay/Anchor Procedure with a TIN and performing NPI that match a PGP-operating NPI combination (**Step 29**).

- **Step 31. Attribute remaining Clinical Episodes to participating ACHs:** If the Clinical Episode was initiated at a participating ACH and is not assigned to a PGP per **Step 30**, then assign it to that participating ACH’s CCN.

---

48 Assumes that the attending NPI and operating NPI are different.
49 Only consider Carrier claims with positive standardized allowed amount.
50 Assumes that the attending NPI and operating NPI are different.
By the end of this step, all Clinical Episodes attributable to the Performance Period are identified. As described above, the hierarchy applied is as follows: a) assign first to the PGP that has an attending NPI for the Anchor Stay/Anchor Procedure, b) assign second to the PGP that has operating NPI for the Anchor Stay/Anchor Procedure, c) assign third to the ACH that initiates the Anchor Stay/Anchor Procedure.

- **Step 32. Exclude Clinical Episodes that overlap with CJR/BPCI initiatives:** Apply the following exclusions to the Clinical Episodes:
  - Exclude Clinical Episodes that overlap with episodes from the Comprehensive Care for Joint Replacement (CJR) model.
    - Specifically, identify CJR episodes as MJRLE Clinical Episodes initiated by ACHs participating in the CJR model. Exclude the CJR episodes and any other Clinical Episodes overlapping with those CJR episodes.
  - Exclude Clinical Episodes that overlap with episodes from the BPCI model.

- **Step 33. Allow no more than one Clinical Episode to occur at a given time for a beneficiary:** For all the Clinical Episodes (excluding those identified as CJR/BPCI overlaps in Step 32) for the same beneficiary where the start date of a second, newly initiated Clinical Episode occurs between the start and end date (inclusive) of the initial Clinical Episode, select which Clinical Episode to retain using the following logic:
  - For Clinical Episodes that overlap more than one other Clinical Episode, apply the overlap logic in a sequential pairwise fashion. Reconcile overlap between the initial Clinical Episode and the immediately subsequent Clinical Episode. Then, reconcile the retained Clinical Episode with the next subsequent Clinical Episode. Repeat this logic until the retained Clinical Episode no longer overlaps with another Clinical Episode.
  - If at least one of the initial Clinical Episode and the immediately subsequent Clinical Episode is a non-MJRLE, then retain the initial Clinical Episode, unless the initial Clinical Episode was a non-participant Clinical Episode and the subsequent Clinical Episode was a participant Clinical Episode, in which case, retain the subsequent Clinical Episode. This logic is illustrated in Table 12.
    - Two Clinical Episodes for the same beneficiary can be initiated on the same day only if one is in the OP setting and one is in the IP setting. In cases such as this, treat the IP Clinical Episode as the initial Clinical Episode and the OP Clinical Episode as the subsequent Clinical Episode, and follow the logic illustrated in Table 12.
o If both the initial Clinical Episode and the immediately subsequent Clinical Episode are MJRLEs, then retain subsequent Clinical Episode regardless of the ownership of the Clinical Episode. This logic is illustrated in Table 13.

Table 11 – Clinical Episode Selection Logic

<table>
<thead>

Step 34. Subset Clinical Episodes to Participants: Subset the Clinical Episodes remaining after Step 33 to only those attributed to a Participant. This dataset is used to calculate Performance Period spending for reconciliation purposes.

The Clinical Episode dataset at the end of Step 33 is used to update patient case mix for the final Target Price.

51 Subsequent Clinical Episode starts between the start date and end date (inclusive) of the initial Clinical Episode. It is either treated as a readmission of the initial Clinical Episode or a new Clinical Episode canceling the initial one.

52 See Footnote 51.
