5o9, Inc (dba 3PHealth)	<p>The Choice platform allows providers to unify and individualize the delivery of any digital health service or content via a single point of access and helps patients to effectively navigate the system to utilize the most efficient care delivery channel. As a platform, we hide the complexity of digital healthcare delivery from patients providing a single, meaningful interface, that increases engagement and reduces care management and delivery costs. We do not provide each individual service. We enable the provider to consolidate and deliver any content or service into an individualized care plan that is delivered via a mobile device including being able to launch two-way communications functionality including phone, messaging, and video for enhanced patient-provider engagement.</p> <p>Patient Focused Care Plans (electronic): Choice enables providers to electronically capture the following care plan elements:</p> <ul style="list-style-type: none"> • Our fully customizable database lets providers determine which information to capture and allows patients to change their communications preferences, health goals and information in real-time, and make this information available to the server/portal/EMR at next login • The practice/individual provider may e-prescribe digital care services and content, just as they e-prescribe medication today. How they combine content, services and reminders into care plans is entirely under their control. Our interface allows for a single app to display a different set of care access and navigation options to each individual patient. • Our standards based approach allows for straightforward integration with EMRs or other practice database solutions and can work with existing rules engines to determine standardized care delivery navigation. 	www.3phealth.com	Liz Coker	liz.coker@3phealth.com	303-938-1769	N/A	N/A	N/A

ChartLogic	<p>Many EMR vendors use voice dictation to improve their electronic charting process, but all fall short of the voice-driven technology of ChartLogic EMR. Our integrated PrecisionVoice™ employs superior command and control voice navigation and highly accurate speech recognition for more efficient charting from day one. An extensive library of specialty specific vocabularies combined with templates, SmartFields™, macros, and other customization tools allows you to complete a unique patient record in 90 seconds or less.</p> <p>ChartLogic EMR includes many customizable features and modules that will streamline your practice, making your investment in a paperless office truly worthwhile. You can prescribe medications electronically with ePrescribe, manage and create templates using ChartLogic's Template Builder, and get the most out of your billing with E/M Consultant. With a variety of flexible tools at your disposal, ChartLogic EMR adapts to your workflow without forcing you to change the way you work.</p> <p>Electronic charting has little value if you're constantly clicking through drop boxes and searching hundreds of pop-up pages, which is why ChartLogic displays a complete patient note on a single screen. Everything from medical history to diagnosis codes to referral reply letters can be accessed from this screen, making it easy for you to complete a comprehensive note without getting lost in forms and files. The end result is an electronic note in <90 seconds.</p>	http://www.chartlogic.com/	Chris Langehaug	chrislangehaug@chartlogic.com	800-838-5899	N/A	N/A	N/A

<p>Chronic Care Management, LLC</p>	<p>Care management software and services; cloud-based care planning; connected homes.</p> <p>Chronic Care Management, LLC is a volume-to-value, workflow solution-oriented IT and clinical staffing provider. Developed by a primary care physician with first hand population health and primary care experience, the company develops and deploys software and care management programs that foster cloud-based, goal-directed, collaborative care planning. The solutions bring together healthcare providers, systems and stakeholders around a central, person-centered care plan that drive positive clinical outcomes for patients and positive financial outcomes for practices. We provide practices a concrete path from volume to value, and empowers organizations who are participating in alternate payment models with a formal platform to foster care coordination, a focus on advanced care planning, care transitions, medication reconciliation and a number of other success-driving areas. Chronic Care Management, LLC also can help develop “Connected Homes” for patients which can provide tailored physiological monitoring fitted specifically to a patient’s chronic conditions. The remote patient monitoring data, upon practitioner review, is incorporated into the care plan—simultaneously providing direct clinical value to patients and needed chronic disease management support that can help keep patients at home, and out of high cost settings like emergency rooms and hospitals.</p>	<p>www.ChronicCareManagement.com</p>	<p>Cara Kirtley</p>	<p>info@chroniccaremanagement.com</p>	<p>440-248-6500</p>	<p>N/A</p>	<p>N/A</p>	<p>N/A</p>

M3 Information LLC	<p>The M3 Checklist is a 27-item, web-based, patient-rated assessment of symptoms of major depression, bipolar disorder, PTSD, and four anxiety disorders (panic, GAD, social phobia, and OCD). There are also questions that assess functional impairment and substance abuse. It has been validated in a large, ambulatory primary care clinic at UNC, and validated against the Mini-International Neuropsychiatric Interview (MINI) using clinician raters, with psychometric properties that meet or exceed those of single-disorder instruments, including the PHQ-9, GAD-7, and PCL.</p> <p>Our technology is listed on SAMHSA's list of tools for integrated care settings, and is NCQA-approved for autocredit within their Patient Centered Medical Home recognition program, the only mental health assessment tool for primary care practices to earn this distinction.</p> <p>With its multidimensional view of behavioral health (depression, bipolar, anxiety, PTSD, substance, functional impairment), low cost, and interoperability across EHRs and HIEs, the patient reported outcomes generated by the M3 Checklist can be the key fulcrum to leverage real-time risk stratification tools to identify comorbid Medicaid populations in need of interventions that cross medical and behavioral health boundaries (e.g., patients with COPD, substance use, and anxiety disorders). Integrated, collaborative care made easy.</p> <p>We are all about improving the management of behavioral health conditions in primary care settings, where 75% of such patients are treated.</p>	www.m3information.com	Steve Daviss MD	steve@m3information.com	410-782-0077	N/A	N/A	N/A

Patienttoc	<p>PatientToc is a Multi-Function Patient Engagement and Patient Reported Outcomes (PROS) Collection System. It integrates with EHRs, provides reading assistance for low-literacy patients and gathers information in 60+ languages.</p> <p>PatientToc automates the collection of essential information from patients about social determinates, quality of life, risk behaviors, patient-reported symptoms and patient experience, and eliminates barriers to collecting these types of data from low-literacy and non-English speaking patients facilitating improved care for vulnerable populations.</p> <p>PatientToc emphasizes making patient reported information (PROS) “actionable.” It prepares and transmits patient-reported data for use at point of care, care management, population management, QI and research. The system can be programmed to send real-time alerts regarding individual patient needs to care managers, care team members and members of the medical neighborhood. PatientToc can facilitate an immediate “virtual connection” to participating service providers, social service agencies, and other programs.</p> <p>PatientToc’s Patient Engagement System can deliver personalized health education materials and videos to patients based on presenting problem, diagnoses, demographics, and survey response. It produces population health management reports, analytics for use in outreach and risk detection, and generates an obfuscated database for research.</p>	www.patienttoc.com	Brian Holler	brian.holler@patienttoc.com	424-361-9640	N/A	N/A	N/A

<p>CONTINUED Saturn Care, Inc.</p>	<p>CONTINUED care teams to work collaboratively with the patient to improve outcomes, lower costs and achieve quality metrics.</p> <p>The system aggregates a wide range of clinical and behavioral data from a variety of sources, including home monitoring devices (glucose meter, blood pressure, weight and medication adherence) and validated patient surveys, and applies clinical analytics to highlight problem areas and gaps in care that need to be addressed. For the clinician, CDMP generates a unique single-screen ‘patient snapshot’ of data and analyses that can be viewed from within the EHR, making patient encounters much more efficient and effective.</p> <p>In a NIH clinical study of 399 difficult to control diabetes patients, CDMP lowered both A1C levels and diabetes distress (Diabetes Care, April 2015, reprint available upon request). CDMP is the result of 12 years and \$50 million in grant funding in partnership with the Joslin Diabetes Center and other leading institutions. The know-how of leading clinical and behavioral experts in diabetes, hypertension and related conditions is incorporated into CDMP’s design, algorithms and clinical decisions support capabilities. CDMP has been integrated with a number of EHR system and home device data streams for monitoring blood glucose and blood pressure. The system has also undergone significant independent third party security testing and approved for deployment on some of the most sensitive health care IT networks (e.g., US Department of Defense and the National Health Service in the UK).</p>	<p>www.saturncare.com</p>	<p>Phil Heifetz</p>	<p>pheifetz@saturncare.com</p>	<p>610-745-7668</p>	<p>Richard Kedziora</p>	<p>rkedziora@saturncare.com</p>	<p>610-772-3989</p>

Practices seeking a vendor to support their participation in the model, especially Track 2, may be interested in reviewing this list for potential partners.

Please note that this table includes all vendors who voluntarily submitted contact information to CMS. CMS is not endorsing any vendor included on this list, nor does inclusion on this list confirm that a specific vendor's products will meet the CPC+ requirements. Practices should reach out to the vendor directly to learn more about their product.
