

# Ann & Robert H. Lurie Children's Hospital of Chicago Integrated Care for Kids (InCK) Model Illinois

**Lead Organization:** Ann & Robert H. Lurie Children's Hospital of Chicago (Lurie Children's) (Award Recipient)

**Maximum Award Amount Over 7 Years:** \$16,000,000

**State Medicaid/CHIP Agency:** Illinois Department of Healthcare and Family Services

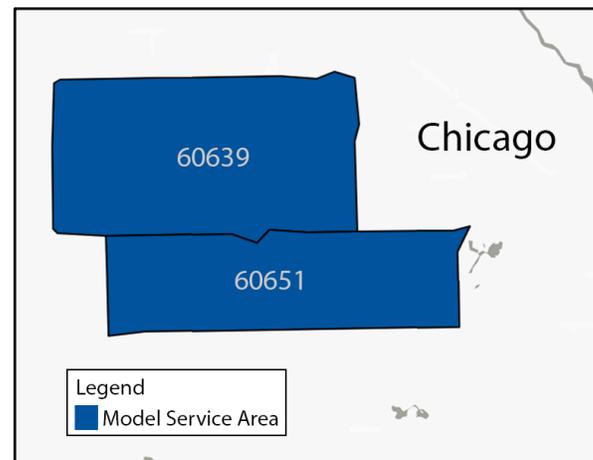

**Model Goals:** All Hands Health Network (AHHN) is led by Lurie Children's, a major pediatric hospital with extensive community partnerships throughout Chicago. Lurie Children's aims to expand access to quality primary care, specialty care, and behavioral health services while building care coordination and service integration capacity. AHHN is designed to adapt and synthesize existing resources where possible, improve care coordination for those served by Medicaid managed care organizations (MCOs), and build on existing Medicaid initiatives, namely the new Integrated Health Home state plan amendment.

**Highlights:** Service Integration Coordinators (SICs) will work directly with families and children to facilitate assessment screenings, identify children's needs, and connect them to the appropriate services. Lurie Children's will assign SICs to providers based on geography. SICs are expected to spend the majority of their time in schools and health centers. AHHN will support integrated coordination between SICs and MCOs as well as the expansion of Lurie Children's collaborative model of care infusing behavioral health support across community partners. AHHN will also support training and referral assistance for primary care providers, expand the trauma-informed Parenting Support program, and extend telehealth capabilities.

**Implementation Strategy:** AHHN partners will develop a two-generational needs assessment tool to stratify AHHN attributed children into service integration levels and appropriately care for children based on their individual needs. This cloud-based assessment will be available at core child service providers and community partners in the area using a smart device or web-based application. Core child service providers, MCOs, youth, parents, and caregivers will have role-based access to the application and schools may choose to incorporate the assessment into the student enrollment process. Families will complete the needs assessment for younger children and adolescents will complete the assessment themselves. Immediately upon completion, individuals will be linked to a community resource database to receive information on appropriate referrals and resources.

**Alternative Payment Model:** Lurie Children's will build on Illinois' Integrated Health Home initiative and its existing Medicaid managed care infrastructure with an alternative payment model (APM) focused primarily on incentive pools for providers serving the attributed population. Providers qualifying for the APM will be grouped into three incentive pools: 1) Primary Care Provider; 2) Community Services; and 3) Care Team. The APM has a fee-for-service foundation with an added incentive pool to pay for performance on cost and quality measures.

**Community Partners:** AHHN Partnership Council members represent local core child service providers including Cares Line, Catholic Charities, Chicago Department of Public Health, Chicago Public Schools, Community Counseling Centers of Chicago (C4), Division of Specialized Services for Children, Greater Chicago Food Depository, Illinois Association of Medicaid Health Plans, Illinois Department of Healthcare and Family Services, Lutheran Social Services of Illinois, Metropolitan Family Services, Northwest Side Housing Center, PCC Community Wellness Center and Youth Outreach Services.

## Model Service Area & Population

**Target population:** ~42,000 Medicaid beneficiaries from birth to age 21, residing in two contiguous zip codes in Chicago's Cook County.

This model is supported by the Centers for Medicare & Medicaid Services of the U.S. Department of Health and Human Services.
